GOLD CERMET CONDUCTOR

ESL 8835-1B is a mixed bonded, high conductivity gold conductor for use on alumina. It exhibits excellent adhesion and is well suited for use as resistor terminations, and for microwave applications. It allows printing of 75 micrometers and 100 micrometers wide lines with a suitable screen.

The 8835-1A is an alloyed version of 8835-1B, and is designed to minimize the Al-Au intermetallic compound formed during elevated temperature aging of aluminum ultrasonic wire bonds.
